Behind the data

Blogging about science

The academic community has taken blogging by storm in recent years, with a third of scientists now reading or writing blogs. Research Trends reviews the most popular to find out how researchers are using blogs to spread their ideas and build communities.

Tending the GM garden: does public interest fertilize or poison the field?

Public interest in a scientific field can be a double-edged sword, attracting both good and bad publicity. Research Trends investigates the effects of positive and negative public opinion on the highly controversial, and often polarizing, issue of genetically modified crops.

People Focus

15 minutes of fame

There are many ways to raise your profile, and a television appearance, reaching potentially many thousands, will certainly get your name out there. However, is this audience likely to contain researchers who might cite your work? Research Trends investigates the effect of broadcasting your research on citations.
